Acidum ascorbicum and the other vitamins adjuvances in magisterial preparations (Diaderm & Antisept-v) in the treatment of acne in our professional practice

Ylfete Shatri Mucaj, Gentiane Mucaj, Lizeta Dervishaj, Shpresa Haxhibeqiri and Luljeta Hetemi
Kosovo University Clinic Center, Kosovo

The point of presentation in our professional experience is to Express the importance of the Acidum ascorbicum (Vit C) and their vitamins adjuvances in our magisterial preparations mentioned before as antioxydantse, epitelisance, revitalisance, revitalization and mechanical assistant of active substances action in magisterial preparations during the medical treatment of acne (even if it is an antibiotic, anti-inflammatory, keratolitic or adstringents). The time period of treatment with mentioned preparations has been 6 years, but to see and to observe the therapeutic success we started the

studying and observation for a time period of 2 years (January 2014–January 2016). The number of the treated patients was 1216, patients of different ages and sex, and also different kind of acne, which we treated with DIADERM and ANTISEPT-V. This was the first group and also we had a second comparing group of 350 patients of different ages, sex and different kind of acne but who were treated with their magisterial preparations without Vitamin adjuvances. As a conclusions, we found out that the first group, treated with DIADERM and ANTISEPT-V had obviously more success than the second group.

Biography

Ylfete A Shatri - Mucaj, dermatovenerology and clinical pharmacology specialist; For specialization of clinical pharmacology is one of the first generations for basic specialization in this field in Balkans. She finished post-graduation and specialization studies in the University of Novi Sad.
